OVERVIEW

The purpose of this analysis is to utilize deep-learning neural networks in order to analyze the success of applicants for funding.

Data Preprocessing

What variable(s) are considered the target(s) for your model?

- The column IS_SUCCESSFUL is considered the target for this model.

What variable(s) are considered to be the features for your model?

- APPLICATION_TYPE and CLASSIFICATION are considered to be features.

What variable(s) are neither targets nor features, and should be removed from the input data?

- EIN and NAME should be removed from the input data.
